Hi Maurice!

On the whole it's very good already la. The good things are like how you're mostly available when we wanna find you, making sure we do our work, and discussing all the problems often and showing us how to approach the problems. It was also motivational that you described your successes in the university, haha makes us wanna be successful.

For the bad things, maybe it's better if you were more stringent with datelines and assigned work. haha cuz alot of times we didn't finish our assigned work in time and thinking back now right, if everything was done on time like our lit review or introduction, then we could have done a better job and be more relaxed. Next, i think it's okay to check up on the students less often but i think this depends on your students also, HAHA for us most of the time we're there one so no need worry!  
I think tt's all liao. haha okay i gg finish packing my luggage liao. See you!

Regards  
Chin How

Overall I am happy with FYP, I learnt alot of stuff and produced a relatively good project. On top of that our group learn how to conduct data analysis properly and python programming which is out of biotech modules (Even what we doing it just the tip of an iceberg). It is true our FYP is tougher and more demanding regradless of effort and time. However, i feel it is worth the time and every effort for this project. A lot time is wasted in this project (Failed passages, testing pcr, DNA extraction). However, i believe this is because of we are the first group to do this project, the time usage can be optimised and thus enable the next group to conduct experiment more wisely.

The way you coached us in fyp taught me alot of techniques and knowledge in doing a project, like how to think about the qn, how to tackle the problem, how to apply what i learnt in 3year polytechnic. The way you work closely with us make us feel that you values this project and thus, making me want to focus and try my best in the project. In your fyp supervision and coaching, you always ask for opinion and discuss together make me feel a "sense of belonging" to the project. The schedule you planned for us is very helpful in our time management, especially in our tight timetable.

The only bad thing i find for me is that sometime you introduced too much stuff to me when trying to solve a problem or doing the report. This may be because i am a slow learner. However, this enable me to learn more and think more in future when writing a report and looking at all angles of the problem or question.

Subject Comments on FYP

Comments:

Dr. Ling was impartial upon doing his research with his students by treating them equally and allowing them to share the work. He devoted a lot of his time with his students, which was not seen in many other lecturers, and even helped most of the research till as late as 9pm. He even brings his students' work to greater heights by publishing their work and participating in events like the Young Scientist Symposium . Overall, he is a great lecturer in bringing out his students to their fullest potential .

Extremely helpful, provide information to students who ask for them to all students (inclusive of non-FYP students).

Often around to help students out (not too busy or often absent).

Weekly check and update of report/ FYP progress (no last minute changes or a re-write up of FYP report a few weeks before submission)

Personally help out in FYP experiments and the writing of report (Easier communication between FYP supervisor and students)

To: Maurice Ling <mauriceling@acm.org>

In essence of what i heard,

Positives: They said u are very knowledgable, willing to share ur knowledge to them. If theres something you dont know when they get to u, u will get back to them 15 minutes later. Experiments are flexible, can discuss with you relatively on the similar level to improve on project designs.

Negatives: Stubborn (need to convince u), demanding (but for their sake, should be ok) and time committments.

Mostly good points. They like the way u keep ur low profile. They had fun doing research with u.
